

6" Stainless Steel Volleyball / Umbrella Sleeve Item SSDI-01/6

Congratulations!

You are purchasing the finest stainless steel Deck Insert for pool and patio use!

Our inserts and caps are custom made from 303 Stainless Steel and machined to precision specifications.

Understanding your new Deck Insert will help your installation go smoothly.

IMPORTANT!

- 1) Do not remove the grounding screw prior to installation.
- 2) Removing the black plug at the bottom of the insert allows water in the insert to drain.
- 3) Determining where the insert should be installed is the pool owner's choice. 4-6" outside the coping will suffice.
- 4) Prior to installation, it is recommended that you remove the stainless steel cap that comes with your insert. Place tape on the top hole so it will protect the insides and threads from filling with concrete or locking the cap. You can cut out the tape off afterwards when the insert is set.
- 5) DO NOT overtighten the stainless steel cap. Screw the cap in place until it is flush with the insert or stops. Using a coin or hand is all that is necessary.
- 6) Keep the threads to the inserts and cap clean and free of obstruction.
- 7) The inside diameter of the insert is 1-1/2". Your new insert is designed to easily receive a 1.5" support or umbrella.
- 8) Brass Adapters are available on line for umbrella use. These will help keep your umbrella from lifting or twisting in the wind. See www.coolpoolproducts.com/products/Brass-Deck-Adapters.html

Retrofitting for existing pools

- 1) The dimensions of the SSDI-01/6 are 2" OD, 6" tall, 1.5" ID.
- 2) Core drill a hole that will allow ample room to set your insert.
- 3) Place the insert a safe distance from the coping to allow a solid anchor point.
- 4) Lightly sand the top and let your inserts dry and set.
- 5) Common adhesives: Quik Crete, epoxy, liquid nail.
- 6) See your favorite pool retailer or builder for more recommendations.
